EXECUTIVE SUMMARY

The regular occurrence of floods and droughts in Cambodia, often within the same year, makes the country among the most disaster prone in Southeast Asia. This situation has important implications for Cambodia's economy and food security. First, an estimated eighty percent (80%) of the country's 14 million people depends heavily on fisheries and agriculture – two most seriously hit economic sectors during disasters - as their primary means of livelihood. A slight change in the predictability of floods and droughts can seriously disrupt livelihoods and food security. Second, with high poverty incidence in the country, insecure livelihoods and food sources contribute further to increased vulnerability, as many of these families rely on the Tonle and Mekong rivers.

Previous emergency response efforts on regular droughts and flooding focused on giving temporary provisions of food, shelter, health services and sanitation to communities. Subsequent evaluation of these efforts led to the realization among government and non-government emergency service providers that an effective emergency response should establish disaster preparedness, mitigation and prevention mechanisms at all levels. Effective disaster management involves working with stakeholders, especially the most vulnerable groups, and strengthening local-level capacity for prevention, mitigation and emergency response.

These core concepts of integrated response and mechanisms underpin community-based risk reduction (CBDRR) strategies being implemented in Cambodia by the National Committee on Disaster Management (NCDM) and leading NGOs. NCDM, a network of various government agencies engaged in managing emergencies and implementing prevention and mitigation strategies, leads government initiatives and is supported by local and international NGOs in implementing CBDRR strategies in 13 of the 24 provinces in Cambodia. Formal local government structures such the Provincial Committee for Disaster Management (PCDMs) and Commune Council Committee for Disaster management (CCDMs) are also involved in the efforts. Major funding support for CBDRR programs comes from the Asian Development Bank, the Asian Disaster Preparedness (ADPC) and DIPECHO, and Oxfam. Priorities go largely into community-based capacity-building and training for partners – local authorities, communities and local groups – on disaster management at the provincial, commune and village levels. Aside from capacity-building activities, some NGOs have supported the construction of small-scale flood and drought mitigation structures.

The use of participatory planning methods in CBDRR activities has been crucial in fostering awareness, stakeholder-driven identification of needs and collective emergency planning. The support for local CBRR initiatives is urgent, and a national advocacy for CBDRR is needed. A key policy area for advocacy is to decentralize selected authority and responsibilities from NCDM to provincial and commune structures, supported by coordination mechanisms and standards of practice to ensure quality of delivery and to meet CBDRR outcomes. Among implementers and service providers, documentation and sharing of best practices and lessons in CBDRR are timely actions that could ensure the success of various national and local efforts.

Monitoring and Reporting Progress on

Community-Based Disaster Risk Management in Cambodia

April 2008

Partnerships for Disaster Reduction-South East Asia
Phase 4

INTRODUCTION

The regular occurrence of floods and droughts in Cambodia, often within the same year, makes the country among the most disaster prone in Southeast Asia. This situation has important implications for the Cambodia's economy and food security. First, an estimated eighty percent (80%) of the country's 14 million people depends heavily on fisheries and agriculture – two most seriously hit economic sectors during disasters - as their primary means of livelihood. A slight change in the predictability of floods and droughts can seriously disrupt livelihoods and food security. Second, with high poverty incidence in the country, insecure livelihoods and food sources contribute further to increased vulnerability, as many of these families rely on the Tonle Sap and Mekong rivers.

Previous emergency response efforts on regular droughts and flooding focused on giving temporary provisions of food, shelter, health services and sanitation to communities. Subsequent evaluation of these efforts led to the realization among government and non-government emergency service providers that an effective emergency response should establish disaster preparedness, mitigation and prevention mechanisms at all levels. Effective disaster management involves working with stakeholders, especially the most vulnerable groups, and strengthening local-level capacity for prevention, mitigation and emergency response.

Communities and local governments are increasingly being recognized as important actors who are in the best position to identify their needs and suggest appropriate mechanisms for prevention and mitigation as drawn from their experiences and local knowledge. With the change of disaster management thinking towards community-based risk reduction (CBDRR), a multi-sectoral and institutional approach has been taken by the Government of Cambodia through the initiatives of the National Committee on Disaster Management (NCDM) and the Asian Disaster Preparedness Center (ADPC) Partnerships for Disaster Risk Reduction in Southeast Asia (PDR-SEA) program. This review exercise has been undertaken to provide an overview of existing CBDRR initiatives and to assist in identifying gaps and emerging areas for development in community based disaster risk reduction and management in Cambodia.

This report has been culled from the summary of project documents and questionnaires submitted for the various CDBRR and DRM activities such as the Strategic National Action Plan (SNAP) and the Community Based Disaster Risk Management (CBDRM) award. Secondary data collection was drawn from interviews and discussions with NGOs and government representatives, but limited to submitted information and survey of specific community and local-level CDBRR activities.

The analysis and recommendations contained in this report were presented to relevant NGO and government representatives, who then drafted a manifesto and proposed policy recommendations. The report was presented by His Excellency Peou Samy to Cambodian Prime Minister His Excellency Hun Sen during the Fifth Disaster Management Practitioners' Workshop held in Phnom Penh in April 2008.

OVERVIEW: DISASTER RISKS IN CAMBODIA

FLOODS

Cambodia is one of the five countries located along the Mekong River, and its landscape consists of rolling plains and lowland. Annual rainy season commences in July, with flooding occurring between September to December. During the monsoon season, Cambodia experiences flash floods usually after heavy rainfall. The provinces of Battambang, Kampong Chhnang, Kampong Speu, Kampong Thom, Kampot, Kandal, Pursat and Rattanakiri are regularly hit by flash flooding. The second type of flood, the much slower but prolonged flooding, is caused by the overflow of Tonle Sap river and Mekong tributaries, inundating the provinces of Kampong Cham, Kratie, Kandal, Prey Veng, Stung Treng, Svay Rieng and Takeo.

Summary Table of Natural Disasters in Cambodia, 1987-2007

	No. of Events	Killed	Injured	Homeless	Population Affected	Damage USD (in 000's)
Flood	12	1,125	53	275,805	9,514,614	327,100
avg. per event		94	4	22,984	792,885	27,258
Drought	5	0	0	0	6,550,000	138,000
avg. per event		0	0	0	1,310,000	27,600
Epidemic	8	788	0	0	413,570	0
avg. per event		99	0	0	51,696	0
Wind Storm	1	0	0	0	0	10
avg. per event		0	0	0	0	10

Source: EM-DAT: The OFDA/CRED International Disaster Database, www.em-dat.net - Université catholique de Louvain - Brussels - Belgium

In 2000, Cambodia saw the worst flooding in recent history, with a total estimated damage of USD150 million. It affected more than three million people in 22 of the 24 provinces of the country, displacing 85,000 families and killing 182.

DROUGHT

Drought in Cambodia is characterized by loss of water sources caused by the early end or delays in expected seasonal rainfall. The traditional drought/lean season is between the months of

August and November. While not as severe as floods in terms of impact, it severely affects farming productivity especially among rice growing communities who rely solely on rain or river-fed irrigation. Low agricultural yield due to extended drought has increased indebtedness of families and contributed to widespread food shortages. The worst drought incident in 2002 had affected two million people and incurred a total damage of USD 38 million.

Fishing and farming suffer heavily as these sectors depend on the predictability of the weather and volume of rainfall. Traditionally, the rise in water levels signals the beginning of farming season, more fishing grounds or new migration routes. However, changing environmental patterns means earlier or longer dry spells and unpredictable rainfall.

The influx of economic investments in Cambodia has yet to trickle down to the majority of the population. Poverty estimates show that at least 35 percent are making less than one dollar a day. Exposure to disasters and economic and social displacement brought about by floods and droughts make the poor more vulnerable and least likely to recover from resulting displacement.

Exposure to disasters and economic and social displacement brought about by floods and droughts make the poor more vulnerable and least likely to recover from the displacement.

COMMUNITY BASED DISASTER RISK MANAGEMENT (CBDRM) INITIATIVES IN CAMBODIA

This section describes the formal structures and network of partnerships for community-based disaster risk management in Cambodia. CBDRM is a strategy that builds upon existing capacities and coping mechanisms of communities to collectively design and implement appropriate and doable long-term risk reduction and disaster preparedness plans. The strategy involves the participation of local actors, particularly vulnerable communities, who actively work to identify causes of vulnerability and actions to mitigate the impact of vulnerability from these natural disasters. Additionally, the strategy empowers communities towards long-term capacity to adapt. With recurrent drought and flooding and threats from other natural disasters in Cambodia, CBDRM is seen as the way forward in minimizing enormous loss of life, property and livelihood. In Cambodia, the government considers CBDRM as an integral part of its rural development program to alleviate poverty.

GOVERNMENT AGENCIES

National Committee for Disaster Management (NCDM)

The National Committee for Disaster Management (NCDM) was established in 1995 to serve as the coordinating body for all disaster management-related activities of the government. It is also recognized as the primary agency for managing emergencies and building the resilience of communities to natural disasters. The agency's other key mandates include implementing prevention and mitigation strategies to reduce the impact of disasters on life, livelihoods and infrastructure, and issuing and recommending guidelines and policies for legislative and budgetary support for emergency and disaster management. As a coordinating and policy recommending body, NDCM's goal is to build an effective system for disaster prevention, effective disaster response and rapid disaster recovery.

Its decision-making structure is composed of representatives from 17 ministries and four officials from other government offices. A Secretariat coordinates all activities and serves as the point-of-contact for disaster management efforts and information. The entire membership meets every July, right before the onset of the rainy season.

NDCM is currently finalizing the drafting of the Strategic National Action Plan for Disaster Risk Reduction (SNAP) as part of the country's commitment to the Hyogo Framework of Action (HFA) agreed by 167 countries at the World Conference on Risk

Reduction (WCRR) in Kobe, Japan in January 2005. The eight-year strategic plan lays out national strategies for strengthening partnerships and building institutional capacity for DRM. At present, NCDM coordinates all disaster related programs, including CBDRM. As part of its strategy to institutionalize CBDRM, the NCDM works with various NGOs to establish disaster management committees at the provincial, district commune and village levels in target provinces, and build the capacity of local authorities and communities through training programs.

The Asian Disaster Preparedness Center (ADPC) through Partnerships for Disaster Risk Reduction in Southeast Asia (PDR-SEA) program provides technical support to NCDM for the implementation of the CBDRM strategy.

In the organizational chart shown in Figure 1, member ministries of the NCDM each have disaster management components in their action plans. The Department of Hydrology and River

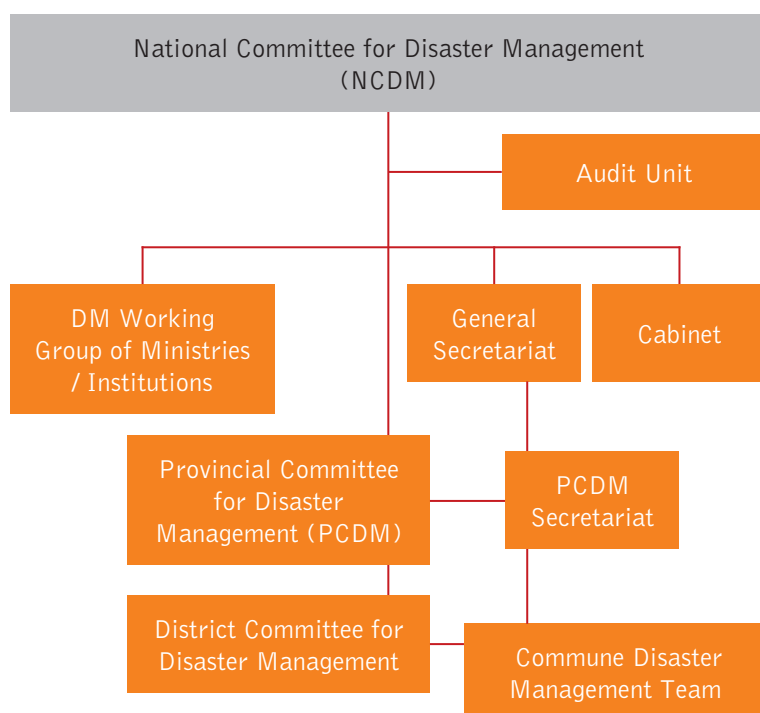

Works under the Ministry of Water Resources and Meteorology (MOWRAM) leads the observation, collection and dissemination of hydro-meteorological information to all government ministries, stakeholders and communities. Information generated by the MOWRAM is used to monitor water levels, rainfall and river flows, which are necessary for disaster preparation and response in the communities.

The Ministry of Environment Youth and Sports (MOEYS) has included disaster preparedness in the curriculum by including regular discussions of flood, drought and health hazards (avian flu, dengue and malaria) in the classrooms. The Ministry of Women's Affairs (MOWA) is also raising awareness in schools and lobbying local government officials to reduce the number of road and traffic accidents among school children.

The Ministry of Agriculture, Forestry and Fisheries (MAFF) ties such measures to improve food security. The

MAFF, together with other agencies, has invested in irrigation and water catchment projects in some parts of the country. It has also increased its capacity building activities for crop diversification and awareness for emerging hazards such as avian influenza.

Figure 1_ NCDM Organizational Structure

Source : National Committee for Disaster Management (NCDM)

Cambodian Red Cross (CRC)

The Disaster Management Department of the Cambodian Red Cross (CRC) was established in 1994. With lessons from the flooding of 1996, the CRC piloted its Community-based Disaster Preparedness Program (CBDP) in late 1998. It began with addressing flood hazards and was developed further to include drought impacts.

The goal of the CBDP program is “to reduce the impact of disasters on the most vulnerable people affected by disasters in Cambodia”. The program has three objectives: (1) to develop the capacity of the CRC to effectively prepare for disasters, and (2) to respond to, natural disasters affecting Cambodia, and (3) to successfully implement natural disaster prevention and mitigation strategies at the community level, through its network of Red Cross Volunteers (RCVs).

The CRC’s CBDP has among the widest coverage in the country, spanning 9 provinces, 23 districts, 94 communes and 317 villages. The current phase of the CBDP focuses on Kratie, Prey Veng, Pursat and Svar Rieng provinces. Activities in the field include the development of Hazard Vulnerability Capacity Assessments (HVCAs), Village Disaster Reduction Plans (VDRPs) and implementation of disaster risk reduction (DRR) measures. Of these areas, 27 villages have developed their HVCAs and plans to increase this number to 40 villages are underway. A number of commune councils have committed to incorporating the VDRPs into their commune development plans (CDPs) and more commune councils in the target provinces will be encouraged to do the same.

As part of the IFRC’s global agenda, the CRC is currently finalizing its CBDRR strategy. Among its biggest investments are in capacity building and community-based disaster preparedness planning activities. One main component of the long term strategy is the Disaster Response Preparedness (DRP) project, currently in its inception phase, which aims to strengthen the capacity of the CRC to efficiently meet the basic needs of affected people and communities. As a capacity building project, it looks at strengthening its internal structure and its coordination with its external partners by clarifying roles and responsibilities. The DRP will also be integrated into the CBDP activities across the country.

The Cambodian Red Cross (CRC) acts as an auxiliary to the government and is the only non-government organization with formal membership in NCDM. The organization’s strength lies in its extensive field presence, with trained field based staff and local volunteers in all its branches in the 24 provinces.

DRM NETWORKS

Three major networks are seriously implementing disaster risk management programs. While these networks do not always directly implement community based disaster management activities, their members or their local partners either have a field presence or are working at the provincial level. There are existing overlaps in some programs and target areas, but each network has distinct specializations that support local level activities.

One network is the NCDM, a network of government ministries. As described in Figure 1, the NCDM is the recognized government focal point for DRM related activities. It has the following membership:

- Ministry of Interior
- Ministry of Defense
- Ministry of Environment
- Ministry of Economy and Finance
- Ministry of Public Works and Transport
- Ministry of Agriculture, Forestry and Fisheries
- Ministry of Health
- Ministry of Information
- Ministry of Education, Youth and Sports
- Ministry of Cults and Religious Affairs
- Ministry of Rural Development
- Ministry of Industry, Mines and Energy
- Ministry of Women's Affairs and Veterans
- Ministry of Social Affairs, Vocational Training and Youth Rehabilitation
- Ministry of Posts and Telecommunications
- Ministry of Water Resources and Meteorology
- Ministry of Tourism
- Ministry of Land Management, Urban Planning and Construction
- Secretary of State for Civil Aviation
- High Command of Armed Forces

Each member ministry takes the lead in developing policies on disaster management activities relevant to their mandates. The representatives from this group are mandated to meet every July to plan and coordinate responses and clarify roles before the expected arrival of the rainy season. To harmonize efforts and roles, suggestions were put forward during a national consultation meeting to form a technical group from member ministries to provide technical expertise and bring focus to CBDRM initiatives within the ministries.

Additionally, the NCDM coordinates a working group for emergency response and rehabilitation work. Members include NGOs, the IFRC and CRC, the UN Disaster Management team and representatives from the health, agriculture and rural development sectors. This group of non-government organizations is further broken into subgroups on emergency response, food security, health, small scale infrastructure on water and sanitation and preparedness and mitigation.

The second major network is the United Nations Disaster Management Team (UNDMT), which is the collective and coordinated UN disaster management structure reporting to the UN Country team, is composed of country representatives from the UN Food and Agriculture Organization (FAO), United Nations Development program (UNDP), United Nations Children's Fund (UNICEF), UNFPA, World Food Program (WFP) and World Health Organization (WHO). The World Food Programme is the present coordinator of the team.

The third major network is the Humanitarian Accountability Network (HANet), which promotes accountability in the humanitarian sector. This group is currently chaired by CARE

and has World Vision, Oxfam GB, IFRC, CRC, CONCERN and other local NGOs in its membership. The network also serves as forum for facilitating and promoting accountability among practitioners, and advocating for standards and good practices.

CBDRM ACTIVITIES OF NON-GOVERNMENT ORGANIZATIONS

In a quick survey of non-government organizations working in the country, there are 10 international NGOs with significant presence and funding support for various social development initiatives. These NGOs have been implementing CBDRM activities in varying levels.

Action Aid

Established in 1999 in Cambodia, ActionAid is an international organization working to fight poverty and promote human rights (women's rights, education, food security, human security during conflicts and emergencies, just and democratic governance and the right to life and dignity in the face of HIV/AIDS).

Action Aid has recently established CBDRR in Cambodia. Its program called “**Strengthening community resilience to flood and drought in Cambodia**” seeks to build the capacity of community members and local authorities to understand and prepare for flood and drought. The project works with partner NGOs to reach its target of 48 villages in Kratie, Svay Rieng and Banteay Meanchey provinces over a period of 15 months.

Project activities include the capacity building and training of CCDMs, VDCs, youth volunteers and school teachers. Awareness-training activities are conducted in 16 primary schools. Technical training on disaster preparedness, mitigation and management, community development processes and project orientation seminars are also conducted with local authorities and local leaders.

ActionAid's program includes an information and awareness raising component that reaches out to the larger village population and is integrated into the school curriculum. Local groups and local authorities are trained to conduct vulnerability and hazard assessments, and develop village development plans. To support this, there is a conscious effort to strengthen the relationship and coordination with the local and national level structures on CBDRM.

CARE

CARE is an international organization working with the most vulnerable individuals and households to identify resources, share experiences, and address poverty through sustainable solutions. The main activities of CARE in Cambodia are in education, health, rural development and emergency response.

CARE's DRR work is built into its Integrated Rural Development Program implemented in Prey Veng and Svay Rieng provinces. The DRR components of the IRDM program have taken off from lessons learned from the Disaster

Table 2_ Survey of NGOs working in the country

	Areas	Number of Communes	Beneficiaries	Funding	Status
Action Aid	Bantey, Mencheay, Krabe, Svay Rieng	9	18, 163 individuals	352,941 Euro	2007-2008
CARE	Prey Veng, Svay Rieng	15			3 years 2006-2009
CONCERN	Kg Cham, Kg Chimang, Pursat, Siem Reap			349,475 Euro	4 years 2008-2010
GRC	Kratie, prey Veng, Pursat, Svay Leng, Kg Chimang	7		432,237 Euro 23,600 USD	1 year Jan 2007 - Mar 2008
CWS	Svay Rieng	All communes		13,000 USD	6 months Jan - Jun 2008
LWF	Batambang, Kg Chimang, Kg Speu			655,338 Euro	3 years 2005-2008
OI	Kg Speu, Svay Rieng, Kratie	13	15,000 households	1.3M USD	1-3 year project ending 2008
PLAN	Kg Cham, Rattmakiri	6 district level		130,000 USD	1 year project
WV	Kg Chimang, Takeo	9		242,310 USD	3 years 2006-2009
ZOA	Oddar Meanchey	7		656,000 USD	2 years 2006-2008

Preparedness Planning program, which was started in 2004. The initial project worked on capacity-building of local authorities through action planning exercises.

The new component **Integrated Rural Development Program**, which began in June 2006, aims to put together functional drought and flood preparation and mitigation action plans and establish accessible information exchange networks in at least 75 percent of the target villages. At this phase of implementation, roles and responsibilities of the village implementation committees (VICs) are clarified, and coordination with local and national authorities strengthened.

Another project, the Community Led Innovations in Disaster Preparedness, builds community capacity for flood and drought preparedness and management. Major project activities are drought emergency needs assessments, indigenous early warning systems and small scale mitigation infrastructure operation.

CONCERN Worldwide

Concern Worldwide has been in Cambodia since 1991. Its mission is to strengthen the ability of poor and most vulnerable people to exercise their rights and make informed choices to achieve a better quality of life without compromising the environment, and with the government meeting its obligation to respect, protect and fulfill the rights of the Cambodian people

The Disaster Risk Reduction project is one component of Concern's Supportive Initiatives Livelihood Improvement (SILIC) program. DRR work is conducted through 18 local partner NGOs and includes

Activities
Capacity building, awareness raising, small mitigation infrastructures, participatory vulnerability assessments, orientation workshops, training of CCDM, VDCs, CDP/CBDRM planning, DDR in school curriculum.
Action planning, mapping, EWS, infrastructure
Awareness raising, small scale infrastructure, capacity building of local structures, community assessments, emergency response
27 villages with HVCAs, VDRPs, DRR, volunteers, capacity building, CDPs, CBDRR, department integration, coordination
Support PCDMs, action planning, work with NGOs and provincial departments to support provincial DRR action plan
Capacity building, CDBP and HVCA, ECHO, first aid training, IEC materials distribution, small scale infrastructure, rice store
Capacity building of partners, local and national structures (planning, training), small scale infrastructure, community assessments, livelihood assistance
Linking with local government and NGOs, integration of DRR into programs
Capacity building of local structures and community, planning, IEC, distribution, saving scheme, link with agri, self help groups
Capacity building of communities and local structures, formation and training of VDNCs, integration of DRR into local plans, small scale infrastructure, livelihood support

awareness raising, support for 23 small-scale mitigation infrastructure systems benefiting 3,938 vulnerable families.

Concern has had a number of achievements from previous project cycles including supporting community infrastructure projects, responding to emergencies and supporting replanting of rice paddies. Future plans include DRR training of partner NGOs, completion of risk vulnerability assessments with the communities, development of action plans and strengthening of coordination and capacity of the local authorities and local partners in implementing CBDRM.

Church World Service (CWS)

The Church World Service has been in Cambodia since 1979, delivering relief and implementing development programs. Its mandate has been to develop the capacity of the most vulnerable to meet their basic needs sustainably, and to participate in the emerging democracy. CWS works with local partners and community organizations focusing on building technical and institutional capacity.

With the support of the ADB, ADPC and MOWRAM CWS recently completed the Community-based Disaster Risk Reduction Project in nine villages in Svay Rieng province. These villages are pilot sites for the project on Disaster Risk Reduction, which ran from July 2006-September 2007 and whose main achievement was the development of a three-year Action Plan for Disaster Risk Reduction. Its current project, Provincial Partnership for Disaster Risk Reduction, undertakes action planning, training, establishment of CCDMs and VCDMs and focuses on supporting the PCDM of Svay Rieng province in implementing the action plan.

Plans to expand to four more provinces are being explored, subject to the availability of funding.

DIPECHO

The European Commission has been supporting humanitarian programs in Southeast Asia for the last ten years. Since then, support for Cambodia has doubled, taking up 25 percent of the budget for the region. With the exception of the Oxfam, most NGOs and local NGOs implementing disaster management and humanitarian programs receive funding from DIPECHO. There has been a shift in strategy within ECHO, moving from funding broad disaster-related activities to more local level and community-based interventions. There is also an increase in investment for capacity building of national and local structures and awareness raising at all levels.

Lutheran World Federation (LWF)

Established in 1979 in Cambodia, the Lutheran World Federation (LWF) is a church-based international organization whose overall program goal is to empower rural communities to manage development processes, advocate for their rights and improve their options for sustainable livelihoods.

From 2003 to 2007, LWF implemented the Community-based Disaster Management projects in 300 villages across the provinces of Kampong Speu, Kampong Chhnang and Battambang together with Dan Church Aid, Church World Service and partners from their Integrated Rural Development Through Empowerment projects. It also worked with the NCDM and CRC in facilitating local planning processes to ensure that CBDRM was integrated into the local development plans. Related participatory activities include organizing village disaster volunteers and building the capacity of the PCDMs, DCDMs, CCs through training. Information and awareness-raising activities such as the distribution of information and educational materials were also conducted. Small-scale community infrastructures for disaster mitigation were supported.

Current project focuses on capacity building by training of trainers on CBDRM, conducting more CBDRM trainings and organizing a CBDRM forum while continuing to strengthen coordination with other NGOs and the local authorities.

Mekong River Commission (MRC)

The MRC was established in 1995 as part of the agreement between Cambodia, Laos, Thailand, and Vietnam to design and plan long-term and cross-cutting strategies for sustainable use and management of all water and land resources in the Mekong River Basin. The MRC's Flood Management and Mitigation Center

(FMMP) based in Phnom Penh leads in flood forecasting and dissemination of flood-related information to vulnerable communities. It works with national partners such as the Cambodia Red Cross and Action against Hunger.

Every year, the MRC and FMMP would organize the Annual Mekong Flood Forum to assist managers, civil society organizations and other DRR implementers to share their experiences in flood mitigation and management and to identify ways to improve flood management in the region.

Oxfam International

Oxfam International is a global group of independent organizations dedicated to overcoming poverty and fighting injustice. The lead agency for the humanitarian program is Oxfam Great Britain. Other Oxfam agencies with presence in Cambodia are Oxfam America, Oxfam Hongkong, Oxfam Quebec, Oxfam Australia, Oxfam Novib and Oxfam Solidarite.

Oxfam is highly regarded for its directions to build human resource for disaster management in the country. Since 1999 up to present, Oxfam, jointly with Cambodian Red Cross and CWS, has provided 13 trainings on disaster preparedness and response to about 600 participants representing NCDM, INGOs, CNGOs and the UN.

The Oxfam International CBDRR program has three components: community-based flood preparedness, community-based drought preparedness and mitigation, and community-based disaster risk reduction. It works with partners in Kratie for the community-based flood preparedness, Kampong Speu for community-based drought preparedness and mitigation and Svay Rieng for community-based disaster risk reduction. Oxfam also responds to emergencies such as flash floods, with recent emergency efforts in Kratie in 2006 and Preah Vihear in late 2007.

A cross-cutting element that ties the three programs is a common goal to reduce risks from disasters, increase resilience of people and communities to drought and flood, and capacitate communities, partners, field staff and local authorities to implement CBDRR strategies. Oxfam and its partners work closely with the NCDM and its counterpart structures at the local level.

Since January 2005, the joint Oxfam program has invested more than USD 1.3 million in CBDRR and emergency efforts, which have directly benefitted 16,636 households and aided another 28,666 households.

From 2003 to 2006, Oxfam, in cooperation with CCK, implemented a pilot project on Flood Preparedness and Mitigation in 13 villages in Takeo. Local-level activities involved preparation of village needs assessments, formulation of village DRR plans, capacity-building on key topics on disaster management, gender, leadership, accountability, community mobilization and climate change, among others. During the project period, Oxfam supported the construction of infrastructure such as flood gates, water catchments and latrines.

Plan International

Plan International first established its presence in Cambodia in 2002, with its office in Siem Reap. Plan works with children and their families, communities, organizations and local governments to implement their program interventions on health, education, water and sanitation, income generation and cross-cultural communication.

To launch its CBDRR efforts, Plan initiated a DRR capacity building program for its staffs and community partners. The organization plans to eventually integrate DRR in its programs. In preparation for its programmatic integration, Plan is building relations with organizations, network and government agencies working on DRR to assist them build organizational capacity for future programming.

World Vision (WV)

World Vision is a Christian humanitarian organization dedicated to working with children, families and their communities worldwide to reach their full potential by tackling the causes of poverty and injustice. For many years, WV has responded to emergencies in the country but it was only recently that it has developed a long term strategy for disaster management. World Vision established the Community Disaster Mitigation project (CDMP) under its Emergency Affairs (HEA) Program, where they work closely with CCDMs to improve their understanding of their roles in disaster management and build their capacity by providing trainings on disaster management, and CBDRM, report and proposal writing, accountability, and local capacity for Peace and environmental conservation. Through this project, information on natural disasters such as floods and droughts and emerging disasters threats like avian influenza are systematically shared with communities. To support community learning, WV organizes cross-visits between the CCDMs from the two provinces where they work. Parallel efforts included the formation and training of and support for self-help groups, which are crucial support mechanisms for CCDM.

WV plans to eventually integrate disaster management into the area development plans (ADPs), of which 20 are already developed for six provinces and Phnom Penh City.

ZOA Refugee Care

ZOA-Refugee Care supports refugees, internally displaced (IDPs), returnees and other groups who are affected by conflict or natural disasters in their transition from their current state of instability and lack of basic needs into a situation where enabling conditions for structural development have been (re)established.

From 2004 to 2006, ZOA implemented a program geared towards reducing the impact of droughts in Oddar Meanchey province. Program achievements include the selection and training of village disaster management councils (VDMCs), and formulation of participatory risk assessments and DRR plans. ZOA also collaborated with NCDM to provide training to the CCDM and the PCDM of Oddar Meanchey.

The organization has also undertaken drought mitigation activities like construction of irrigation ponds, wells and forms of water catchment, and distribution of farming implements and drought-resistant rice varieties and cash crops. The Ministry of Water Resources and Meteorology (MOWRAM) assisted in the efforts by training staff on drought early warning systems.

The new program phase, which aims to build the capacity of communities to reduce the impact of disaster, particularly drought, has expanded its coverage from the pilot site in Oddar Meanchey province to seven communes. Another 33 VDMCs were formed and trained on CBDRM and hazard, vulnerability and capacity assessments. Those who were trained will lead the development of more village disaster management plans. Three more CCDMs were formed and further training activities were conducted for the new councils, as well as refresher training conducted by NCDM and MOWRAM for incumbent CCDMs and the PCDM.

Additionally, ZOA provided tractors and other farming implements, distributed rice seeds, and supported the construction of drought mitigation structures.

Future plans include expanding the level and number of capacity building activities at all levels, and increasing agricultural yields through crop diversity.

TRENDS AND GAPS IN THE IMPLEMENTATION OF CBDRM

GEOGRAPHICAL SPREAD OF CBRM PROGRAMS

Table 3 shows color coding of priorities for disaster risk management in each province vis-avis the presence of CBDRR initiatives by NGOs. For instance the province of Banteay Mencheay places high priority on flood and drought. Three NGOs have either completed programs or have ongoing CBDRR projects in the province.

It is worth noting that some provinces that have been identified as high priority areas in the flood and drought vulnerability maps made by the World Food Program in 2004 do not have a CBDRM program. Such is the case of Kandal province, a high priority area for flood and drought, but with no relevant CBDRR program. Kampot and Rattanakiri have registered flash flood incidents, but they do not have any CBDRM activities as well. The province of Prey Veng ranks first and second priority for both flood and drought, respectively, but has only one NGO working on CBDRM.

There are 260 flood-prone and 270 drought prone communes in the whole country. CBDRM projects are currently being implemented in only 12 out of the 23 provinces and in less than 100 communes. Svay Rieng (flood and drought) has the most number of CBDRM projects with four, followed by Kampong Chhnang (flash floods) with three. Other provinces like Siam Reap and Pursat have at least one program intervention in the areas.

Nine provinces - Banteay Mencheay, Kampong Cham, Kampong Speu, Kampong Thom, Kandal, Kratie, Prey Veng, Preah Vihear and Takeo - experience regular incidence of flood and drought throughout the year. Four of these provinces have one CBDRM program each while three provinces have two ongoing CBDRM programs.

PROGRAMMING AND PARTICIPATORY PROCESSES IN CBDRR: ACHIEVEMENTS AND LIMITATIONS

CBDRR program beneficiaries are among the most vulnerable groups, and they are usually found in farming and fishing communities. Local capacities in all aspects of disaster managements are limited for many provinces. To improve capacity for risk management and emergency response, all CBDRM programs currently prioritize capacity building of committees for disaster management at the provincial, commune and village levels. All NGOs have invested heavily in training and capacity building activities on CBDRM for local authorities, implementing partners and communities.

The use of participatory processes such as participatory mapping and assessment exercises in CBDRR activities has enabled communities to identify their needs and consider marginalized groups such as children, the elderly, the poorest households and people with disabilities in the planning process, allowing for a more coordinated and effective delivery of support in emergency situations.

The convergence of community-based efforts and formal initiatives through formal government structures, primarily the Provincial Council on Disaster Management (PCDM) and the Commune Council on Disaster Management (CCDM), provides a sustainable partnership model for knowledge and technology transfer and future adjustments in CBDRM strategies.

CBRM programs for droughts are generally characterized by provision of small-scale infrastructure (water catchments) construction and farming implements and materials. However, these programs do not have a strong skills training component for program recipients.

While many non-government organizations have been undertaking CBDRR or implementing CBDRR in their project activities, only CARE and Oxfam have systematically integrated DRR in project plans and development programs. To improve the quality and ensure sustainability of present and future CBDRR programs, it is necessary to conduct and document impact assessments of program interventions on CBDRR. In some areas, NGOs concluded project operations before local capacities were strong enough to sustain DRR activities.

NEED TO DEVELOP A MULTI-HAZARD APPROACH

Given the traditional focus of CBDRM programs on flood and drought, many CBDRM programs neglect to consider emerging hazards in their analysis. Thus, a multi-hazard approach should be integrated into these programs. A small number of NGOs has started addressing emerging hazards like avian influenza, but a programmatic multi-hazard approach has not been taken by many CBDRM programs.

LESSONS AND RECOMMENDATIONS

INSTITUTIONALIZATION OF CBDRM

Despite the number of capacity building activities being implemented throughout the country, many NGOs point out that the present leadership and participation from the CDMs at all levels still fall short. To fill in the gap in governance, there should be sustained capacity-building and development of new strategies and activities. Skill sets for CBDRM have to be well-thought out. Aside from technical skills, village leaders and local government officials have to learn basic project operations and management.

Experiences from implementation show that building the capacity of local leaders and government structures in CBDRM do not guarantee transfer of knowledge and capacity to communities. To be successful, institutional capacity-building has to be holistic in its approach and should consider the level of resources and limitations faced by implementing institutions to deliver CBDRM. For instance, the NCDM does not have enough staff and budget to coordinate and implement its activities. The same limitations are faced by PCDMs and DCDMs. In areas without external (NGO) assistance, PCDMs, DCDMs and CCDMs are practically non-existent. It is more realistic and practical to link the community-based initiatives to district and provincial levels while strengthening the national structures.

The NCDM needs to be strengthened as an institution so that it can lead in CBDRM activities on the ground. It has to have the capacity to consistently manage and hold accountable its counterparts at the local level. Staffing at the Secretariat needs to be reinforced and NCDMs' access to national support for budget allocation for its activities and plans needs to be improved.

THE ROLE OF THE NGOS IN CBDRM

Non-government organizations have been at the forefront of organizing CDMS and field service delivery for CBDRM. Despite their primary role in CBDRM, NGOs face challenges in sustaining their efforts. First, community ownership has to be made an integral part of their participatory goals and to foster this ownership, NGOs need to present clear and transparent exit strategies during the entry phase.

Second, there is an observed lack of coordination among NGOs working in the field. This is evident in the geographical and programmatic distribution of CBDRM programs, with some areas overly subscribed and some with hardly any NGO presence or CBDRM activity. To maximize human and financial resources,

there should a regular forum where NGOs can discuss and share their interventions, as well as their coverage areas. This is to minimize duplication of efforts among project partners and participating local communities. Sharing of key technical and social expertise on health, sanitation, and management is also a positive way to harmonize to the extent possible efforts and resources.

To analyze the impact of the various programs and projects implemented throughout the years, a comprehensive impact assessment can be organized jointly with organizations working in the same fields, as such assessment will provide insight into the effectiveness and relevance of past and current efforts, and lead the development of new resources and strategies for CBDRM. The assessment will identify urgent areas for intervention and the appropriate actions – legislative, political, institutional and economic – to mainstream CBDRM.

NGOs will continue its leadership role in disaster management in the country. In doing this, a scaling up approach is called for. An emerging approach is the multi-hazard approach and this is projected to be the direction of future CBDRM projects. To maximize resources, they have to work with national and local structures to deliver CBDRM activities in the field. In a context of diminishing funding sources, NGOs have to mobilize new and local resources.

CAPACITATING AND EMPOWERING COMMUNITIES

The overall involvement of communities in CBDRM is the cornerstone of strategy to empower and capacitate communities in the face of natural disasters. This has to be integrated during project set-up by conducting social preparation activities during the inception phase. Efforts have to be supported by community social acceptance, thorough identification and disaggregation of data on stakeholders, and formal mandate and sustainable resource allocation.

ANNEX 5. ROLES AND RESPONSIBILITIES

Roles and Responsibilities of the NCDM General Secretariat

- To ensure the continuity and functioning of the National Committee for Disaster Management administration
- To conduct research into the flood, drought, storm, wildfire, epidemics prone areas and other hazards by preparing Preparedness and Emergency Response plans.
- To instruct the provincial, Municipal, District, Precinct, committee for Disaster Management and relief communities about work and technical skill that are the basis for collection of disaster data for damage and need assessment and prepare rehabilitation and reconstruction programmes of damaged infrastructure in co-ordination with institutions UN agencies, IOs, and NGOs concerned.
- To formulate a technical skill training programme for officials who serve Disaster Management functions in provinces, municipalities, district, precinct, and relief communities within the framework of training in and out of the country
- To coordinate work with Ministries/Institutions concerned, local authorities, UN agencies, IOs, and NGOs in order to evacuate vulnerable people to haven and to provide them with security, public education, Emergency Response and other programmes
- To give opinion of the documents related to Disaster Management and the letters of consent. To sum the report up and submit it to the National Committee for Disaster Management. The General Secretariat of the National Committee for Disaster Management has 5 departments as mentioned in article below.

The responsibilities of the Department of Administration and Finance shall be:

- To administer and circulate the National Committee for Disaster Management administrative documents
- To sum up the National Committee for Disaster Management work and other activities
- To govern the National Committee for Disaster Management civil servants
- To collect the needs, formulate a budget proposal, plan a programme of expense, tract and remind of its execution
- To coordinate the National Committee for Disaster Management budget line and expenses
- To administer immovable property, movable object, stock of goods and its inventory

The responsibilities of the Department of Information and Relations shall be:

- To follow weather information, and meteorology and hydrology situation
- To write and compile disaster news
- To issue information regarding various disasters occurring in and out of the country through bulletin and broadcasting system
- To produce disaster posters and leaflets
- To prepare report on hydrology and meteorology situation in collaboration with skilled Ministries/ Institutions and broadcast the warning of the emergency, needs and measures
- To communicate with foreign countries and IOs regarding disaster work.

The responsibilities of the Department of Emergency Response and Rehabilitations shall be:

- To establish a command structure in emergency operation according to the National Policy for Disaster Management upon receiving information on disaster predictions
- To prepare a prevention/ mitigation/ emergency relief plan, and labor rehabilitation and rehabilitation programmes
- To coordinate the research into hazards, services, emergency relief, safety, security, evacuation, and shelters with Ministries/ Institutions concerned, UN agencies, IOs, and NGOs
- To conduct damage and needs assessment and lead the operation when emergency happens

The responsibilities of the Department of Preparedness and Training shall be:

- To prepare equipment, materials and supplies for emergency response
- To formulate plans and programmes for training human resources who serve Disaster Management function at the National/ Local level
- To choose the candidates who participate in the training course in and out of the country
- To educate and disseminate Disaster Preparedness to the local communities and the affected people
- To publish pictorial documents related to Disaster Preparedness and Mitigation.

The responsibilities of the Department of Search and Rescue shall be:

- To coordinate work with the Secretariat of State for Civil Aviation and Ministries/ Institutions concerned in order to conduct the activities in conformity with the organized legislative procedure
- To prepare a plan and submit it to the High-Command of the Royal Cambodian Armed Forces regarding the use of means and SAR intervention forces
- To receive and dispatch information on aircraft/ ship accident and request principles, implementing regulations and instructions from the National Committee for Disaster Management related to the coordination of search and rescue
- To issue official announcement of the crash site when the information is double checked
- To prepare modality and conduct the SAR operation in collaboration with the neighboring country according to agreement on Search and Rescue
- To collaborate with Emergency Coordination Center of State Secretariat of Civil Aviation and identify SAR mission.

DISASTER WORKING GROUP OF THE MINISTRY/ INSTITUTION

Each ministry/ institution has established the Disaster Working Group of the Ministry/ Institution in order to boost the spirit of self-reliance in participating and solving disaster. It is responsible for coordinating all activities involving Disaster Preparedness, Response and Rehabilitation.

PROVINCIAL/ MUNICIPAL COMMITTEE FOR DISASTER MANAGEMENT

At each Province/Municipality there is Provincial/Municipal Committee for Disaster Management comprising the following membership:

The Provincial/ Municipal Governor	President
The Deputy Governor	Vice-President
The Chief of relevant Government Department and the Director of the Provincial/Municipal Red Cross	Members

The duties of the Provincial/ Municipal Committee for Disaster Management shall be:

- To implement the National Policy for Disaster Management
- To prepare guideline and support the activities of the District/ Precinct Committee for Disaster Management
- To make recommendation to the National Committee for Disaster Management on the activities of the institutions concerned and CRC, the Assistance of the National Organizations and IOs that participate in Disaster Prevention, Preparedness, Emergency Response and Rehabilitation.
- To write a report and submit it to the National Committee for Disaster Management regarding damage and make a budget proposal, a proposal of equipment, materials, means of transport and intervention force for action when there is Disaster
- To carry out the training program in order to strengthen the officials who serve Disaster Management functions with technical skill and public education programme at the communities

At each District/ Precinct there is District/ Precinct Committee for Disaster Management whose membership is:

The District/ Precinct Chief	President
The District/ Precinct Deputy	Vice-President
The Chief of relevant offices within the District/ Precinct and the Chief of the District/ Precinct Red Cross	Members

The duties of the District/ Precinct Committee for Disaster Management shall be:

- To implement the National Policy which is involved in Disaster Management
- To choose officials who participate in the training course on Disaster Management at the National or Provincial/ Municipal levels
- To prepare and disseminate disaster information to public
- To forward report on damage and needs to the Provincial/ Municipal Committee for Disaster Management
- To lead operations during disaster including relief assistance, evacuation, shelter, and medical supplies
- To forward the summary report on operation and relief assistance to the Provincial/ Municipal Committee for Disaster Management

AUDITING UNIT

The Minister of the Ministry of Economic and Finance has established auditing Unit under the terms of regulations identified in Sub-Decree No. 81 dated 16 November 1998 on the establishment of auditing institution involving the expense of budget of the Ministries.

Partnerships for Disaster Reduction - South East Asia (PDRSEA) is a multi-phased project implemented by UNESCAP and ADPC with funding support from the European Commission Humanitarian Aid Office (ECHO) since 2001. The Phase 4 of PDRSEA aims to institutionalize the effectiveness of CBDRM into socio-economic development process through strengthening of national and local capacity for the implementation of the Hyogo Framework for Action in order to build up community resilience in the project countries of Cambodia, Indonesia, the Philippines, and Viet Nam. The project activities involve in strengthening and institutionalizing CBDRM through local-level pilot activities, facilitating information dissemination through existing regional and national disaster risk management networks, enhancing ownership of CBDRM programs by developing the capacities of local authorities and promoting CBDRM through Disaster Management Practitioners' Forum.

The European Commission's humanitarian aid department (ECHO) was set up in 1992 to provide rapid and effective support to the victims of crises outside the European Union. Recognizing the importance of pre-emptive measures, ECHO launched its disaster preparedness programme, DIPECHO, in 1996. ECHO's disaster preparedness programme (DIPECHO) targets vulnerable communities living in the main disaster-prone regions of the world and aims to reduce the vulnerability of the population. Between 1996 and 2004, DIPECHO provided more than Å78 million for 319 projects worldwide. These demonstrate that simple and inexpensive preparatory measures, particularly those implemented by communities themselves, are extremely effective in limiting damage and saving lives when disaster strikes. DIPECHO funds support training, capacity-building, awareness-raising and early-warning projects as well the organisation of relief services. The programme has shown that even simple precautions can help save lives and property when disaster strikes. The funds are directed through ECHO and implemented by aid agencies working in the regions concerned. For more details, please visit http://ec.europa.eu/echo/index_en.htm

The United Nations Economic and Social Commission for Asia and Pacific (UNESCAP) is the regional arm of the United Nations Secretariat for the Asian and Pacific regions, located in Bangkok, Thailand. UNESCAP is committed to materialize the visions of the United Nations Millennium Declaration, which was adopted by the UN General Assembly in September 2000. The PDR-SEA project is being implemented jointly by UNESCAP and ADPC at the regional level. For more details, please visit <http://www.unescap.org>

The Asian Disaster Preparedness Center (ADPC), established in 1986 is a regional, inter-governmental, non-profit organization and resource center based in Bangkok, Thailand. ADPC is mandated to promote safer communities and sustainable development through the reduction of the impact of disasters in response to the needs of countries and communities in Asia and the Pacific by raising awareness, helping to establish and strengthen sustainable institutional mechanisms, enhancing knowledge and skills, and facilitating the exchange of information, experience and expertise. For more details, please visit <http://www.adpc.net>
