Business Forum 2016: Risk Reduction and Resilience Buildi April 2016 ural Session: Remarks by Mr. Peter Prügel, German Ambassa

Excellency Minister Anupong (Interior Minister)

Excellency Minister Dr. Pichet (Science and Technology Minister)

^ohil (*Philip Calvert, Canadian Ambassador*)

)r. Krasae Chanawongse (Chairman, ADPC Foundation)

sara (Thai Board of Trade)

sushi Negishi (Country Director, Asian Development Bank)

juished Delegates, Business Leaders, Ladies and Gentlemen,

om my side, a very warm welcome to all of you.

's event wouldn't have been possible without the engagement and rt of a number of institutions. So let me start by expressing my sin de to all the organizers and sponsors

_ .. _..

Asian Development Bank

Government of Canada,

Asian Disaster Preparedness Center,

Global Disaster Preparedness Center,

Asia Foundation

is no doubt that Asia is the most disaster-prone region in the worl recent years the region had to bear the biggest share of human a mic losses caused by disasters that can be very often directly link warming and climate change.

a as well as worldwide, governments and private businesses have creasing losses and damages and are constantly challenged by r ls. Increasing unknown risks can severely jeopardise the competi erprises' and countries' investment profiles.

erefore highly welcome a dialogue between the public and private re expertise and experiences on how to properly assess risks and the risk management into business models and practices.

blic and private sector stakeholders alike, it is of utmost important : t investments are risk-sensitive,

t infrastructure is resilient

<u>I that</u> risk governance systems are in place to secure sustainable 'elopment.

ess resilience is the key to drive economic growth, to protect livelil secure jobs, particularly in at-risk countries and cities.

norning I would like to share with you some of our own experience any has been particularly affected by floods in recent years. The ted damages in the affected Federal States amounted to 7 billion icluded, in particular, damages to private households, public infraivate businesses as well as to agricultural, forestal and cultural fa of the 16 German Federal States.

siness operations and supply chains have been disrupted.

blic infrastructures including major highways and parts of the Gerr lway network were damaged causing logistical processes to fail. I ployees were unable to commute and get to work.

construction and tourism industry were among the most affected ustries. Construction works were already falling behind due to a lc sh winter that year. Hotel and restaurant owners reported high cellation rates and losses even in regions that had not been impa floods or had already recovered.

theless, despite the magnitude of the disaster, private and public any were not hit completely unprepared.

contrary: A number of preparation measures initiated beforehand taken after the floods hit the country, proved to be rather success

st of all, the Federal States coordinated their response efforts whic ossible to support the most affected areas <u>across Federal State b</u>

Display brigades, police forces, and aid organisations worked closely with ergency services of the Federal Government including the Federal Civil Protection and Disaster Assistance (BBK), the Federal Agen chnical Relief (THW), the Federal Police and Federal Armed Force his point I would like to emphasise that the German civil protectio tem owes its strength and effectiveness primarily to its 1,7 million fessionally trained volunteers that are organised in voluntary fire t organisations and the Federal Agency for Technical Relief (THW) nique asset of the German civil protection system.

Iddition to this coordinated approach, it also proved valuable that, owing the flood in 2002, politicians had worked out a bundle of neslation to improve flood prevention in Germany, which induced ch he Federal Water Act, the Code of Building Law, the Law for the C ather Service and the Regional Planning Act.

I finally, it also helped in the aftermath of the flood of 2013 that Gevides a market-based natural hazard insurance system through purance companies as a supplement to building or contents insuran m 2002 to 2013 the Ministry of Interior in Germany recorded a sigrease in this kind of insurance. Today, 32% of all buildings in Gerr covered under this scheme. And this coverage certainly is one kernent in mitigating the financial consequences when it comes to dapite all precautions taken.

bods in Germany as well as in Thailand or the Great East Japan uake in 2011 demonstrate to what extend also highly developed r nerging economies are at-risk.

we take a look at the private sector in these countries. it looks like

, on the contrary, are generally less protected and often hit hardes t of disasters;

y are particularly vulnerable and often unaware of the risk they an ng.

y lack knowledge and have limited resources to reduce and trans aster risks or prepare adequately as they usually have weaker fina ictures and are heavily dependent on credit. So access to financir or challenge for their efforts in disaster preparedness.

by tend to have a lower product width and fewer opportunities to d o expand the product range. As they are already small it is also m cult for them to downsize in recovery.

Es that have been affected by a disaster often ceased their opera

; other hand SMEs are the backbone of many of our economies:

Es play a significant role in all economies and are the key genera ployment and income.

y account for 97% of all enterprises in the Asia Pacific region and r 80% of the employment.

Es are also the engine of the German economy. In 2013, Germar erprises classified as SMEs accounted for 99.3% of the total num erprises.

⇒ to their small size SMEs are also able to adapt quickly. They developed a statistic structure there to algo a statistic structure there to algo a structure there are algo a structure to a structure there are algo a structure to a structure there are a structure to a str

if we aim to strengthen the disaster resilience of businesses, offer oriate solutions for SMEs will be most critical for achieving this.

^tore SME resilience is one of the key elements of Germany's Glot ve on Disaster Risk Management (GIDRM), which is coordinated

itiative not only embeds the perspectives of all relevant ministries ities in Germany, but also brings together a wide range of stakeho eveloping, emerging and industrialised nations working in govern mia, civil society and the private sector.

ides a forum for new and innovative ways of collaboration in disas gement.

his Initiative Germany does not only aim to contribute to the succe nentation of the Sendai Framework for Disaster Risk Reduction be sitize public and private sectors to take risk-informed managemer ment decisions and to promote resilient, sustainable growth and s srity.

lobal Initiative on Disaster Risk Management looks particularly int the private sector.

the one hand, it is an exposed actor that might unknowingly contr creation of new risks.

on the other hand. the private sector can also be a potential pion

with its strategy, the Global Initiative on Disaster Risk Manageme d two undertakings in Asia to improve disaster risk management then resilience of businesses:

i joint partnership with the Asian Development Bank and the Asian aster Preparedness Center, the Global Initiative has closely coop in national government agencies for the promotion of SMEs, as we in chambers of commerce and respective national stakeholders in imanagement in Indonesia, the Philippines, Thailand and Vietnan develop specific solutions and technical support and to compile pe slations and operational factors, surveys have been conducted in get countries.

he forefront is the establishment of 'one-stop-solution' centres by pective government agencies and business associations that will provide disaster risk management related support needed by SME

Bobal Initiative also works together with the United Nations Office aster Risk Reduction and the Pacific Asia Travel Association to for ir efforts particularly on the tourism sector in the Asia Pacific regio

so called Hotel Resilient Initiative aims at supporting the manage els and resorts in order to increase their understanding of disaster l impacts, to reduce their business risks and to improve the protec ir staff and guests. 'elop a risk management standard addressing natural and technol :ards.

se standards help hotels and resorts to improve their disaster risl ergency management capacities. Thereby, it also increases their npetitiveness and provides them a marketing advantage.

nd is one of Germany's most important partners in the Southeast-. It is in the interest of both our countries to boost further business ration between our companies and drive economic development i

ⁱore, we aim at making climate and disaster resilience a business rengthening the resilience of society at large.

's Asian Business Forum is an important step to emphasise the nblic and private sector to work together to strengthen business reconomic stability across regions and to highlight the integral role the sector can and needs to play for a risk-informed, sustainable opment.

nis in mind, I wish you all a fruitful discussion over the next two da you very much for your attention.
